ABSTRACT

A cloud removal approach based on information cloning is introduced. The approach removes cloud-contaminated portions of a satellite image and then reconstructs the information of missing data utilizing temporal correlation of multi temporal images. The basic idea is to clone information from cloud-free patches to their corresponding cloud-contaminated patches under the assumption that land covers change insignificantly over a short period of time. The patch-based information reconstruction is mathematically formulated as a Poisson equation and solved using a global optimization process.

Thus, the proposed approach can potentially yield better results in terms of radiometric accuracy and consistency compared with related approaches. Some experimental analyses on sequences of images acquired by the Landsat-7 Enhanced Thematic Mapper Plus sensor are conducted. The experimental results show that the proposed approach can process large clouds in a heterogeneous landscape, which is difficult for cloud removal approaches. In addition quantitative and qualitative analyses on simulated data with different cloud contamination conditions are conducted using quality index and visual inspection, respectively, to evaluate the performance of the proposed approach.

SUMMARY:

- The program was intended to create knowledge in computer among our students,
- Microsoft PowerPoint is an easy program to use and a powerful tool for giving a presentation.
- Whether your presentation needs a visual kick, tools for collaboration, easy access or the ability to share information beyond the initial meeting, PowerPoint is a good option.
- It can even help reduce speaking anxiety by drawing eyes away from the speaker and towards a screen.
- Just do not expect this technology to substitute for sound and dynamic speaking skills

SUMMARY:

- The Internet has one very simple job: to move computerized information (known as **data**) from one place to another
- The machines that make up the Internet treat all the information they handle in exactly the same way. In this respect, the Internet works a bit like the postal service.
- Letters are simply passed from one place to another, no matter who they are from or what messages they contain.
